

Scratch Pottery

Fort Walton Pottery, ca 1200-1500 C.E.

- Take your piece of paper and draw an outline shape for your pottery piece.
- Take your crayons and color in your drawing. You can use a single color or many patches of color. These colors will be your lines when we paint in the pot later!
- Make sure you press down firmly as you color to avoid having any white gaps.
- Take your black paint and add a bit of liquid soap, about a tablespoon. Stir it together.
- Take a paintbrush or foam brush and paint in your pot. Make sure to get an even coating that is thick enough not to see through but thin enough to make scratching it off easy later.
- Let dry for 3-5 hours
- Once dry, take your stylus/cuticle stick and scratch over the black paint to create a colorful design. You can get as creative as you want with patterns or figures.
